

FARHOD SOYILOV

Full-Stack Developer | FastAPI · Django · Node.js · React · Next.js

Tashkent, Uzbekistan | +998 20 004 27 09 | fsoyilov@gmail.com

farkhod.dev | linkedin.com/in/farhod-soyilov | github.com/Farhodoff

PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience architecting scalable backend systems (FastAPI, Django, Node.js) and modern frontend applications (React, Next.js). Proven record of improving system performance, integrating AI-powered features, and shipping production tools used by 1,000+ daily active users. JDU student and JLPT N2 certified, with a strong focus on clean code and scalable architecture.

WORK EXPERIENCE

Full-Stack Developer — Pharmacy E-Commerce & Management Platform (Remote)

Jun 2026 – Current

- The pharmacy needed a modern platform to manage complex medical data and categories at scale; designed a scalable relational database with PostgreSQL and Prisma and built the full-stack application from scratch with React 19, TypeScript, Node.js, and Express — **delivering a reliable, well-structured system for organizing complex inventory data.**
- Customers needed a fast, easy-to-use shopping experience; built a responsive UI with React and Tailwind CSS, managing state with Zustand — **resulting in a fast, smooth interface across devices.**
- Pharmacy staff needed secure, controlled access to manage inventory; created a secure Admin Dashboard with JWT authentication and RESTful APIs — **enabling safe, efficient inventory control for internal staff.**

Mobile App Developer — Receipt Splitter — AI-Powered Mobile App (Onsite)

Jan 2026 – Mar 2026

- Built a React Native (Tamagui, Zustand) mobile app using Google Gemini AI to scan receipts and auto-split bills — **enabling real-time parsing and instant bill splitting among friends.**
- Developed a Node.js/PostgreSQL/Prisma backend for auth, groups, and transactions, with debt tracking and multi-language support — **delivering secure data management and clear shared-balance tracking.**

Backend Developer — Olma Market Platform (E-commerce, Remote)

Jun 2025 – Jan 2026

- Faced slow checkout and order APIs under growing catalog and traffic load; engineered a high-performance REST API with FastAPI and PostgreSQL, adding efficient indexing and query optimization, then built an event-driven Telegram bot with async updates for order tracking — **cutting response times by 35% and reliably serving 1,000+ daily active users.**
- Needed to offload heavy background tasks (reporting, notifications) that were blocking core request handling; integrated Redis for distributed caching and Celery with RabbitMQ for asynchronous processing — **improving overall system throughput and reducing load on primary services.**
- Internal teams lacked a controlled way to manage logistics and inventory; designed and implemented a Role-Based Access Control (RBAC) system powering a custom Admin Dashboard — **automating internal logistics and inventory workflows and reducing manual admin overhead.**

Frontend Developer — Interactive Service Platform (Booking Platform)

Jan 2025 – May 2025

- The booking site needed strong SEO and fast first-load performance; built the application with Next.js and React using Server-Side Rendering (SSR) — **improving initial page load performance and search visibility.**
- Users needed live booking availability without manual refreshing; implemented WebSocket-based real-time data streaming for booking availability — **removing the need for page refreshes and improving user retention.**
- UI patterns were inconsistent and accessibility was inadequate across the app; built a reusable, accessible component library on Radix UI and Tailwind CSS, and managed global state via React Context and custom hooks — **achieving high Lighthouse accessibility scores and a smooth, native-like experience on mobile and desktop.**

KEY PROJECTS

Nihongo Talk: AI-powered Japanese learning platform (JLPT) with voice coaching and Anki cards. (React, TypeScript, Tailwind, Supabase, DeepSeek AI)

Components-main: Accessible React component library with i18n support and theme customization. (React, Radix UI, Tailwind CSS, TypeScript, i18next)

Video-translate: AI-driven tool for video analysis, transcription (STT), and automated translation into Uzbek. (FastAPI, Whisper/OpenAI, FFmpeg, Background Tasks, React)

TECHNICAL SKILLS

Backend: Python (FastAPI, Django), Node.js, Express, RESTful APIs, Redis, Celery, RabbitMQ

Frontend: JavaScript (ES6+), TypeScript, React, Next.js, Radix UI, Tailwind CSS, i18next

Databases: PostgreSQL, MongoDB, Redis

Tools: Git, Docker, Nginx, Linux, OpenAI API, Telegram Bot API, WebSockets

EDUCATION

Bachelor of Information Technology — Japan Digital University (JDU), Tashkent, Uzbekistan

Oct 2022 – Present

LANGUAGES & CERTIFICATIONS

Japanese: JLPT N2 Certified | **English:** Technical Proficiency | **Uzbek:** Native
